

Topic No	2
Title	Models for Understanding A Profession
Key Concepts	How your perception of Architecture can change so it is an object (building), form (the shape and its relationship to other things) and an Idea (the larger concept). How can studying professions become a useful way to understand the nature and state of the Architectural Profession in Australia? Some of the different models are the • "Traits Model" or competency model - Disciplinary Knowledge (AIA, Awards, AACA, University, The Architects Act, ARBV) - Regulation (AACA, The Architects Act, ARBV, Building Codes, Planning Codes, Contracts) - Autonomy - Altruism - Higher learning • "Continuum Model" - the need for training and Judgment. i.e. Where in the spectrum does an occupation differs from a profession. A draftsman vs an Architect - Skill, competence & procedure • "Power Model" - Unequal amount of knowledge gives asymmetrical use of power - Balancing the use of this power for individual and public good - There is an ethical responsibility to manage power Do we currently understand the relationship and responsibility we have to the client? Examples include: • Ai Weiwei – <i>Remembering</i>, 2009, backpacks and metal armature, 925 x 10605 x 10 cm (364 x 4175 x 4 in), Haus der Kunst, Munich. Shenzhen earthquakes and poor building practises. • Flammable cladding and cracked slab court cases currently in Australia. How is an architect more than someone who does drawings for building and provide a service to a client? How do we attribute value to what Architects do? How can architects recognise that beyond service and what encompasses the profession which include all the above professional traits. Including past and current research. What other things do Architects do that we don't realise? E.g. Aristotle- Epsilon II, Metaphysics. Diagrams- The Divided Line. What are the constellation of things required to be an Architect? What combination of institutions are needed in order to define the role of the Architect? What are the physical things and the abstract things that affect the profession? - Professional Traits exist in the regulations, the institutes and the university. - The Role of the University and knowledge exist in the University, the AACA, the Architects Act, the ARBV, the Exemplars.

	- Legal, Regulatory requirements- University, the AACA, the Architects Act, the ARBV, the codes - Opinions, Exemplars and the Awards: Research, knowledge, awards, exemplars. - Architectural Practice/ services: Contract, design, client, builder. - Markets Mechanisms: Competitive tender, licence to use Property Value, Market prices, skill shortage in builder knowledge etc. - Copyright and intellectual property: patents, standards The need for progress and Thomas Kuhn The Structure of Scientific revolutions
